

SUPPORT STAND RECEPTION DESK

The Reception Stand Holder positions Buddy at eye level and prevents him from falling off the counter. It is an essential accessory for securing the robot in public reception areas such as hotels, banks, reception halls, waiting rooms, administrative counters, etc. The device is integrated into the chassis of the robot and fits onto the part attached to the counter of the reception desk.

A safety clip allows you to lock or unlock the robot. Once fitted, the robot can continue to rotate, giving it the capacity for bodily expression necessary for an emotional robot. The power cable passes through the middle of the support so that the robot can operate continuously.

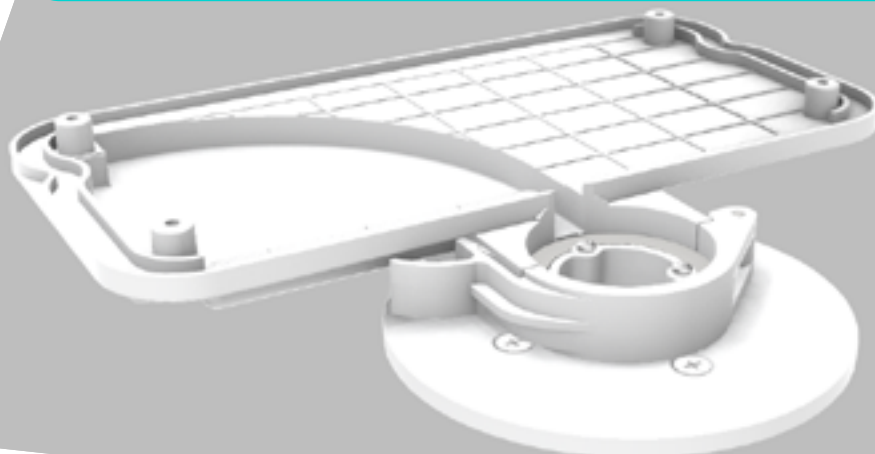

Description:
