

GUIDE FOR STICKER INSTALLATION

STEP 1

After opening your set of stickers, start by cutting with scissors or a cutter each element of your boards with a margin for more security.

When cutting your boards, be sure to keep the organization of the stickers for the complex boards.

STEP 2

Prepare the first elements for installation. Rub with a ruler the protective film of the sticker so that it sticks well to it.

You can gently remove the protective film by checking that the sticker remains well adhered to it. It is best to start at an angle to make it easier to separate from the support.

STEP 3

You can now put the sticker on your Buddy, also start at an angle, then stick the whole sticker avoiding bubbles as much as possible. Pass your fingers several times to eliminate the bubbles and stick your sticker well.

Repeat the process with all the elements of your sticker set!
