

BUDDY EMOI

This application aims to learn how to recognize emotions ranging from joy and excitement to fear and anger.

For children with autism, or who have difficulty recognizing emotions and expressing them, it allows them to initiate interactions and share their feelings.

FUNCTIONING

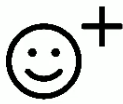

2 game modes are available:

- In Training mode, the child chooses an emotion so that Buddy instantly plays the associated behavior.
- In Play mode, Buddy displays facial expressions on its face and plays out behaviors, then asks the child to recognize them.

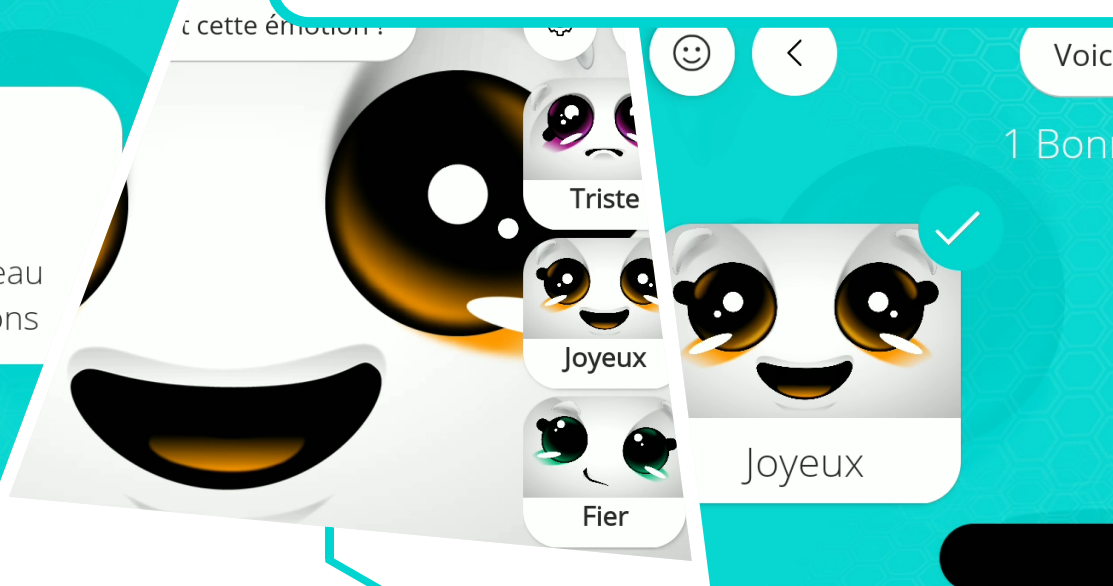

This application works in touch and voice control.
