

BUDDY LAB

This application allows children, via a simple and intuitive interface, to take their first steps in the world of programming to easily assimilate the basic principles and imagine original interactions with Buddy.

Buddy Lab invites the child to create a sequence of actions for Buddy to play them. This app allows to work on fine motor skills, logic and the basics of computer programming, as well as collaborative work.

FEATURES

- Move Buddy's head
- Move Buddy forwards/ backwards and spin it
- Make Buddy talk
- Change Buddy's facial expression (sad, happy, happy, tired...).
- Make Buddy react to events (obstacle detection, caress detection, motion detection)
- Make Buddy recognize cards (delivered with the robot)
- Repeat instructions with loops (with counter, infinitely...)
